

1. (Amended) A document scanning device comprising:

scanning means for scanning an image on a document;

generating means for generating image data based on the scanned image;

transfer means for transferring the image data from said generating means;

selection means for selecting a transfer path for transferring the image data

by said transfer means; and

control means for controlling a scanning operation of said scanning means

in accordance with the transfer path selected by said selection means.

2. (Amended) The document scanning device according to Claim 1,

wherein said control means controls a scanning speed of said scanning means.

3. (Not Amended) The document scanning device according to Claim 1,

further comprising an interface for establishing a connection to an image processing apparatus,

wherein said transfer means transfers the image data to said image

processing apparatus via said interface.

4. (Amended) The document scanning device according to Claim 3,

wherein said selection means selects the transfer path in accordance with parameters of said

interface.

5. (Amended) The document scanning device according to Claim 3, wherein said selection means selects the transfer path, based on an instruction received from said image processing apparatus via said interface.

6. (Amended) An image processing apparatus comprising:
input means for inputting image data;
transfer means for transferring the image data input by said input means;
determination means for determining whether the image data input by said input means are binary data per pixel or multilevel data per pixel; and
control means for controlling a transfer path for the image data by said transfer means in accordance with a determination result by said determination means.

7. (Not Amended) The image processing apparatus according to Claim 6, wherein said input means inputs the image data obtained by scanning an image on a document.

8. (Amended) The image processing apparatus according to Claim 6, further comprising an interface for establishing a connection to another image processing apparatus,

wherein said transfer means transfers the image data to said another image processing apparatus via said interface.

9. (Not Amended) The image processing apparatus according to Claim 8, wherein said control means selects the transfer path in accordance with parameters of said interface.

10. (Not Amended) The image processing apparatus according to Claim 8, wherein said determination means determines, based on an instruction received from said another image processing apparatus received via said interface, whether the image data input by said input means are binary data per pixel or multilevel data per pixel.

11. (Not Amended) A document scanning device comprising:
a scanner which scans an image on a document and generates image data based on the image;
a transmitter which transmits the image data from said scanner;
a selector which selects a transmission speed for transmitting the image data by said transmitter; and
a controller which controls a scanning operation of said scanner in accordance with the transmission speed selected by said selector.

12. (Amended) The document scanning device according to Claim 11, wherein said controller controls a scanning speed of said scanner.

13. (Not Amended) The document scanning device according to Claim 11,
further comprising an interface for establishing a connection to an image processing apparatus,
wherein said transmitter transmits the image data to said image
processing apparatus via said interface.

14. (Amended) The document scanning device according to Claim 13,
wherein said selector selects the transfer mode in accordance with parameters of said interface.

15. (Amended) The document scanning device according to Claim 13,
wherein said selector selects the transfer mode, based on an instruction received from said
image processing apparatus via said interface.

16. (Amended) An image processing apparatus comprising:
a scanner which scans an image on a document and generates image data
based on the image;
a transmitter which transmits the image data from said scanner;
a detector which detects whether the image data obtained from said
scanner are binary data per pixel or multilevel data per pixel; and
a controller which controls a transfer path for the image data by said
transmitter in accordance with a detection result by said detector.

29, 17. (Not Amended) The image processing apparatus according to Claim 16, wherein said controller controls a scanning speed of said scanner.

18. (Not Amended) The image processing apparatus according to Claim 16, further comprising an interface for establishing a connection to an image processing apparatus, wherein said transmitter transmits the image data to said image processing apparatus via said interface.

19. (Not Amended) The image processing apparatus according to Claim 18, wherein said controller selects the transfer mode in accordance with parameters of said interface.

20. (Amended) The image processing apparatus according to Claim 18, wherein said controller selects the transfer mode based on an instruction received from said image processing apparatus via said interface.

21. (Amended) A control method for a scanner, comprising the steps of:
scanning an image on a document;
generating image data based on the scanned image;
transferring the image data obtained in said generating step;
selecting a transferring speed for transferring the image data in said transferring step; and

ap controlling the scanning operation performed in said scanning step in accordance with the transferring speed selected in said selecting step.

22. (Not Amended) The control method according to Claim 21, wherein said controlling step controls a scanning speed of said scanning means.

23. (Amended) The control method according to Claim 21, further comprising an interfacing step for establishing a connection to an image processing apparatus, wherein said transferring step transfers the image data to the image processing apparatus during said interfacing step.

24. (Amended) The control method according to Claim 21, wherein said selecting step selects the transferring speed in accordance with parameters of said interfacing step.

25. (Amended) A control method for an image processing apparatus, comprising the steps of:

inputting image data;

transferring the image data input in said inputting step;

determining whether the image data input in said inputting step are binary data per pixel or multilevel data per pixel; and

an
controlling a transfer path for the image data in said transferring step in
accordance with a determination result obtained in said determining step.

me.
26. (Not Amended) The control method according to Claim 25, wherein
said controlling step controls an inputting speed of said inputting step.

ab
27. (Amended) The control method according to Claim 25, further
comprising an interfacing step for establishing a connection to an image processing apparatus,
wherein said transferring step transfers the image data to the image
processing apparatus during said interfacing step.

n. e.
28. (Not Amended) The control method according to Claim 25, wherein
said controlling step selects the transfer mode in accordance with parameters of said interfacing
step.

Q9
29. (Amended) A computer-readable program for controlling a scanner, said
computer-readable program stored in a storage medium, said computer-readable program
comprising the steps of:

scanning an image on a document;

generating image data based on the scanned image;

transferring the image data obtained in the generating step;

selecting a transferring speed for transferring the image data in the transferring step; and

controlling the scanning operation performed in the scanning step in accordance with the transferring speed selected in the selecting step.

30. (Amended) The computer-readable program according to Claim 29, wherein the controlling step controls an inputting speed of the inputting step.

31. (Amended) The computer-readable program according to Claim 31, further comprising an interfacing step for establishing a connection to an image processing apparatus,

wherein the transferring step transfers the image data to the image processing apparatus during the interfacing step.

32. (Amended) The computer-readable program according to Claim 31, wherein the controlling step selects the transferring speed in accordance with parameters of the interfacing step.

33. (Not Amended) A computer-readable program for controlling a scanner, said computer-readable program stored in a medium, said computer-readable program comprising the steps of:

inputting image data;

transferring the image data input in the inputting step;
determining whether the image data input in the inputting step are binary data per pixel or multilevel data per pixel; and
controlling a transfer path for the image data in the transferring step in accordance with a determination result obtained in the determining step.

34. (Amended) The computer-readable program according to Claim 33,
wherein the controlling step controls an inputting speed of the inputting step.

35. (Amended) The computer-readable program according to Claim 33,
further comprising an interfacing step for establishing a connection to an image processing apparatus,

wherein the transferring step transfers the image data to the image processing apparatus during the interfacing step.

36. (Amended) The computer-readable program according to Claim 33,
wherein the controlling step selects a transfer mode in accordance with parameters of the interfacing step.
